## **Hypothesis Testing Procedure**

- Step 1: Read the claim and write SC and OC
- **Step 2:**  $H_0$  (must have  $= \mathbf{or} \le \mathbf{or} \ge$ ) and  $H_1$  (must have  $\ne \mathbf{or} > \mathbf{or} <$ )

Based on  $H_1$  decide if it is (left tailed test, right tailed test, or two tailed test).

- <u>Step 3</u>: Find the critical value (z or t by using Table 2) and label the region as R for rejection or A for acceptance of  $H_0$
- Step 4: Test statistics =TS =  $\frac{\sqrt{n(\overline{x} \mu)}}{\sqrt{n(\overline{x} \mu)}}$
- Step 5: Conclusion: Accept or reject  $H_0$ ? ( $H_0$  will be rejected if TS falls in critical region otherwise accepted)
- Step 6: Comment: Accept or reject SC? Hint: If  $H_0$  and SC are similar same decision otherwise different decision.
- Step 7: P-value is the area from test statistics and graphically, it is on the same side of critical value and it can be found by using your TI calculator.
- **Problem 1.** At  $\alpha = 0.05$ , test the claim that average life of "Cyan" batteries exceeds 50 months. A sample of 64 batteries had a mean of 53 months with standard deviation of 9.5 months.
- SC:  $\mu$
- Ho: u

$$n =$$

## Solution

## **Hypothesis Testing Procedure (Rejection Region Method)**

**Step 2:**  $H_0$  and  $H_1$ . Decide if it is (left tailed test, right tailed test, or two tailed test). Step 1: SC and OC

<u>Step 3</u>: Find the critical value (**z** or **t** by using Table 2) and label the region as **R** for rejection or **A** for acceptance of  $H_0$ 

**Step 4**: Test statistics =TS = 
$$\frac{\sqrt{n(\overline{x} - \mu)}}{s}$$

Step 5: Conclusion: Is  $H_0$  accepted or rejected? ( $H_0$  will be rejected if TS falls in critical region otherwise accepted)

Step 6: Comment: Is SC accepted or rejected?

Step 7: Find P-value- by using your TI calculator.

**Problem 1.** At  $\alpha = 0.05$ , test the claim that average life of "Cyan" batteries exceeds 50 months. A sample of 64 batteries had a mean of 53 months with standard deviation of 9.5 months.

**SC**: 
$$\mu > 50$$

Ho: 
$$\mu \le 50$$

$$n = 64$$

$$\overline{x} = 53$$

$$s = 9.5$$

*OC*: 
$$\mu$$
 ≤ 50

$$H_{1:} \mu > 50$$

(left tailed test, two tailed test, or right tailed test)

$$\frac{(53-50)}{(53-50)} = 2.526$$

 $\alpha = 0.05$  and n = 64 then CV = 1.645

TS= 
$$\frac{\sqrt{n}(\overline{x} - \mu)}{s} = \frac{\sqrt{64}(53 - 50)}{9.5} = 2.526$$

Conclusion: Accept or reject  $H_0$ 

Comment: Accept or reject SC

P-Value =  $0.0058 < \alpha$ 

**Problem 2.** At  $\alpha = 0.05$ , test the claim that average life of "Cyan" batteries exceeds 50 months. A sample of 9 batteries had a mean of 53 months with standard deviation of 9.5 months.

**SC**: 
$$\mu > 50$$

Ho: 
$$\mu \le 50$$

$$n = 9$$

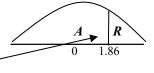

$$\overline{x} = 53$$

$$s = 9.5$$

*OC*: 
$$\mu$$
 ≤ 50

$$H_{1:} \mu > 50$$

(left tailed test, two tailed test, or right tailed test)

$$\alpha = 0.05 \text{ and } n = 9 \text{ then } CV = 1.86$$

$$TS = \frac{\sqrt{n(\overline{x} - \mu)}}{s} = \frac{\sqrt{9(53 - 50)}}{9.5} = 0.947$$

Conclusion: Accept or reject  $H_0$ 

Comment: Accept or reject SC

P-Value = 0.1856 >  $\alpha$ 

**Problem 3.** At  $\alpha = 0.05$ , test the claim that average life of "Cyan" batteries is 50 months. A sample of 49 batteries had a mean of 54 months with standard deviation of 9.5 months.

**SC**: 
$$\mu = 50$$

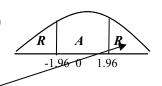

Ho: 
$$\mu = 50$$

$$n = 49$$
  $\overline{x} = 54$ 

*OC*: 
$$\mu$$
 ≠ 50

H<sub>1:</sub> 
$$\mu \neq 50$$

s = 9.5(left tailed test, two tailed test, or right tailed test)

$$\alpha = 0.05$$
 and  $n = 49$  then  $CV = \pm 1.96$ 

$$TS = \frac{\sqrt{n(\overline{x} - \mu)}}{s} = \frac{\sqrt{49(54 - 50)}}{9.5} = 2.947$$

Conclusion: Accept or reject  $H_0$ 

Comment: Accept or reject SC

*P-Value* $= 0.0032 < \alpha$ 

**Problem 4.** At  $\alpha = 0.05$ , test the claim that average life of "Cyan" batteries is different than 50 months. A sample of 9 batteries had a mean of 55 months with standard deviation of 9.5 months.

**SC**: 
$$\mu \neq 50$$
 Ho:  $\mu = 50$ 

$$n = 9$$
  $\overline{x} = 55$   $s = 9.5$ 

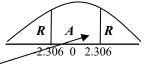

**OC**: 
$$\mu = 50$$

$$H_{1:} \mu \neq 50$$

(left tailed test, two tailed test, or right tailed test)

$$\alpha = 0.05$$
 and  $n = 9$  then  $CV = \pm 2.306$ 

TS= 
$$\frac{\sqrt{n(\overline{x} - \mu)}}{s} = \frac{\sqrt{9(55 - 50)}}{9.5} = 1.58$$

Conclusion: Accept or reject  $H_0$ 

*P-Value* = 
$$0.153 > \alpha$$

**Problem 5.** At  $\alpha = 0.01$ , test the claim that average life of "Cyan" batteries is at most 50 months. A sample of 49 batteries had a mean of 53 months with standard deviation of 8.8 months.

*SC*: 
$$\mu$$
 ≤ 50

Ho: 
$$\mu \le 50$$

$$n = 49$$

$$\overline{x} = 53$$
  $s = 8.8$ 

**OC**: 
$$\mu > 50$$

$$H_{1:} \mu > 50$$

(left tailed test, two tailed test, or *right tailed test*)

TS= 
$$\frac{\sqrt{n}(\overline{x} - \mu)}{s} = \frac{\sqrt{49}(53 - 50)}{88} = 2.386$$

 $\alpha = 0.01$  and n = 49 then CV = 2.326

$$TS = \frac{\sqrt{n(x-\mu)}}{s} = \frac{\sqrt{49(33-30)}}{8.8} = 2.386$$

P-Value = 0.0085 <  $\alpha$ 

Conclusion: Accept or reject  $H_0$ 

Comment: Accept or reject SC

**Problem 6.** At  $\alpha = 0.01$ , test the claim that average life of "Cyan" batteries is at most 50 months. A sample of 16 batteries had a mean of 53 months with standard deviation of 9.4 months.

*SC*: 
$$\mu$$
 ≤ 50

Ho: 
$$\mu \le 50$$

$$n = 16$$

$$\overline{x} = 53$$

$$s = 9.4$$

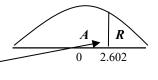

**OC**:  $\mu > 50$ 

$$H_{1:} \mu > 50$$

(left tailed test, two tailed test, or *right tailed test*)

$$\alpha = 0.01$$
 and  $n = 16$  then  $CV = 2.602$ 

TS= 
$$\frac{\sqrt{n}(\overline{x} - \mu)}{s} = \frac{\sqrt{16}(53 - 50)}{9.4} = 1.277$$

Conclusion: Accept or reject  $H_0$ 

Comment: Accept or reject SC

*P-Value* $= 0.1106 > \alpha$ 

**Problem 7.** At  $\alpha = 0.10$ , test the claim that average life of "Cyan" batteries is at least 50 months. A sample of 36 batteries had a mean of 46 months with standard deviation of 10 months.

*SC*:  $\mu$  ≥ 50

Ho: 
$$\mu \ge 50$$

$$n = 36$$

$$\overline{x} = 46$$

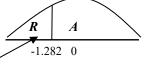

**OC**:  $\mu$  < 50

$$H_{1:} \mu < 50$$

(**left tailed test**, two tailed test, or *right tailed test*)

$$\alpha = 0.10$$
 and  $n = 36$  then  $CV = -1.282$ 

TS= 
$$\frac{\sqrt{n(\overline{x} - \mu)}}{s} = \frac{\sqrt{36(46 - 50)}}{10} = -2.4$$

Conclusion: Accept or reject  $H_0$ 

Comment: Accept or reject SC

*P-Value* $= 0.0082 < \alpha$ 

**Problem 8:** At  $\alpha = 0.10$ , test the claim that average life of "Cyan" batteries is at least 50 months. A sample of 16 batteries had a mean of 47 months with standard deviation of 10 months.

**SC**: 
$$\mu \ge 50$$
 Ho:  $\mu \ge 50$ 

$$n = 16$$
  $\overline{x} = 47$   $s = 10$ 

**OC**: 
$$\mu$$
 < 50  $H_{1:}$   $\mu$  < 50

 $\mu$  < 50 (left tailed test, two tailed test, or right tailed test)

$$\alpha = 0.10$$
 and  $n = 16$  then  $CV = -1.341$ 

TS= 
$$\frac{\sqrt{n(\overline{x} - \mu)}}{s} = \frac{\sqrt{16(47 - 50)}}{10} = -1.2$$

Conclusion: Accept or reject  $H_0$ 

*P-Value* = 
$$0.1243 > \alpha$$

**Problem 9:** At  $\alpha = 0.025$ , test the claim that average life of "Cyan" batteries is **less than** 50 months. A sample of 36 batteries had a mean of 46 months with standard deviation of 12 months.

**SC**: 
$$\mu$$
 < 50

Ho: 
$$\mu \ge 50$$

$$n = 36$$

$$\overline{x} = 46$$

$$s = 12$$

*OC*:  $\mu$  ≥ 50

$$H_{1:} \mu < 50$$

(left tailed test, two tailed test, or right tailed test)

$$TS = \frac{\sqrt{n(\overline{x} - \mu)}}{\frac{s}{12}} = \frac{\sqrt{36(46 - 50)}}{12} = -2.0$$

 $\alpha = 0.025$  and n = 36 then CV = -1.96

Conclusion: Accept or reject  $H_0$ 

$$P$$
-Value =  $0.0228 < \alpha$ 

**Problem 10**: At  $\alpha = 0.025$ , test the claim that average life of "Cyan" batteries is **less than** 50 months. A sample of 16 batteries had a mean of 48 months with standard deviation of 13 months.

**SC**: 
$$\mu < 50$$

Ho: 
$$\mu \ge 50$$

$$n = 16$$

$$\overline{x} = 48$$

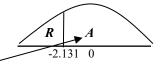

*OC*:  $\mu$  ≥ 50

$$H_{1:} \mu < 50$$

(left tailed test, two tailed test, or right tailed test)

s = 13

Conclusion: Accept or reject  $H_0$ 

Comment: Accept or reject SC

*P-Value* =  $0.2738 > \alpha$
