Questions A. Determine whether the given value is a statistic or a parameter.

1. A sample of divers is selected, and the average age is 41.8 years.
2. After checking computer records for every commercial movie made last year the longest running time is found to be 187 minutes
3. All of the cities mayors are surveyed, and the 250 out of them are found to be democrat.
4. The average speed of 35 drivers on the highway.
5. The average IQs of the top 10 Miss Universe finalists.

## Questions B. Determine whether the given values are from a discrete or continuous data set.

1. A math teacher counts 4 absent students
2. The weight of SUVs made in Japan.
3. The annual average rainfall in California.
4. The times taken for athletes to run 100 m .
5. The numbers of chocolates in various 500 g boxes.

Questions C. Identify which type of sampling of sampling is used: Random, Systematic, Cluster, Convenience, or Stratified.

1. At a local Mall a researcher ask every $10^{\text {th }}$ passing by shoppers about the new security measure.
2. CNN is planning an exit poll in which 100 polling stations will be randomly selected and all voters will be interviewed as they leave the premises.
3. An engineering student measures the strengths of finger used to push buttons by testing family members.
4. An IRS researcher investigates cheating on income tax reports by surveying all waiters and waitresses at 20 randomly selected restaurants.
5. A marketing expert for MTV is planning a survey in which 500 people will be randomly selected from each age groups of 10-19, 20-29, and so on.
6. The author surveyed all of his students to obtain sample data consisting of the number of credit cards students possesses.
7. Fund-raisers for the college of Newport test a new telemarketing campaign by obtaining a list of all alumni and selecting every $1000^{\text {th }}$ name on the list.
8. In a Gallup poll of 1045 adults, the interview subjects were selected by using a computer to randomly generate telephone numbers that were then called.
9. A market researcher has partitioned all Californian residents into categories of unemployed, employed full time, and employed part time. She is surveying 50 people from each category.
10. Motivated by a student who died from binge drinking. The College of South land conducts a study of students drinking by randomly selecting 10 different classes and interviewing all students in each of those classes.

## Question D.

There were six different stat classes that were offered last semester; one student was randomly selected from each class with his/her final score and the class average and standard deviation.

Joe got score of 83 when the class average was 71 with standard deviation of 6.5.
Moe got score of 88 when the class average was 76 with standard deviation of 7.5 .
Nielo got score of 77 when the class average was 72 with standard deviation of 2.3.
April got score of 82 when the class average was 72 with standard deviation of 5.5.
Max got score of 82 when the class average was 71 with standard deviation of 5 .
Alex got score of 82 when the class average was 72 with standard deviation of 6 .
Use the Z-score formula to answer the following questions:
a)Who did relatively better in the class than the rest?
b)Who did relatively worse in the class than the rest?
c)Who got scores that can be considered unusual?

## Answers

## Questions A.

1. statistic,
2. parameter,
3. parameter,
4. statistic,
5. statistic

## Questions B.

1. Discrete,
2. Continuous,
3. Continuous
4. Continuous, 5. Discrete

## Questions C.

1. Systematic
2. Cluster.
3. Convenience.
4. Cluster.
5. Stratified
6. Convenience.
7. Systematic.
8. Random.
9. Stratified
10. Cluster

## Questions D.

| Name | $x$ | $\bar{x}$ | $\mathbf{s}$ | $z=\frac{x-\bar{x}}{s}$ |
| :--- | :---: | :---: | :---: | :---: |
| Joe | 83 | 71 | 6.5 | 1.85 |
| Moe | 88 | 76 | 7.5 | 1.60 |
| Nielo | 77 | 72 | 2.3 | 2.17 |
| April | 82 | 72 | 5.5 | 1.82 |
| Max | 82 | 71 | 5 | 2.20 |
| Alex | 82 | 72 | 6 | 1.67 |

a) $M a x$
b) Moe
c) Nielo and Max
A.

## Regression and correlation

A.

|  | $\boldsymbol{x}=$ Hours Study/week | $\boldsymbol{y}=$ Test Score | $\boldsymbol{x}^{2}$ | $\boldsymbol{y}^{2}$ | $\boldsymbol{x} \boldsymbol{y}$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 15 | 72 | 25 | 5184 | 360 |  |
| 210 | 88 | 100 | 7764 | 880 |  |
| 313 | 92 | 169 | 8464 | 1196 |  |
| 48 | 80 | 64 | 6400 | 640 |  |
| 56 | 77 | 36 | 5926 | 462 |  |
| 64 | 64 | 16 | 4096 | 256 |  |
|  | $\sum x=46$ | $\sum y=473$ | $\sum x^{2}=410$ | $\sum y^{2}=37817$ | $\sum x y=3794$ |

1. Use the data and plot the data as a scattered diagram and comment on the pattern of the points.
2. Compute the correlation coefficient and comment on that $r=0.963$ Very strong...?
3. Compute the slope and $y$-intercept and write the equation of regression line. Slope $=a=2.92, \quad y$-itc $=b=56.41$

$$
y=a x+b=2.92 x+56.41
$$

4. Explain the slope based on the regression equation and the in relation of x and y variables.

In general for every additional hour of study per week the score goes up by 2.92 points.
5. Compute average and standard deviation for both x and y variables. $\overline{\boldsymbol{x}}=7.67, \quad \overline{\boldsymbol{y}}=78.83, \quad \boldsymbol{S}_{\boldsymbol{x}}=3.386, \boldsymbol{S}_{\boldsymbol{y}}=10.28$
6. If one student studies 7 hours a week, use Reg. Equ. to estimate her test score. $\quad x=7, y^{\prime}=73.93$
7. If one student has test score of 85 , use Reg. Equ. to estimate number of hours he spends studying per week.
$y=85, \quad x^{\prime}=9.79$
8. Compute the coefficient of determination $\left(r^{2} \times 100\right)$ and comment on that.
$\left(r^{2} \times 100\right)=\left(.962^{2} \times 100\right)=92 \%, 92 \%$ of variations in test score are explained by regression equation.

B

| X = Experience(yrs) | 14 | 3 | 5 | 6 | 4 | 9 | 18 | 5 | 16 |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $\mathbf{Y}=$ Monthly Salary $\$(\mathbf{0 0 0})$ | 42 | 24 | 33 | 31 | 29 | 39 | 47 | 30 | 43 |

1. Use the data and plot the data as a scattered diagram and comment on the pattern of the points.
2. Compute the correlation coefficient and comment on that $\qquad$
3. Compute the slope and $y$-intercept and write the equation of regression line. $\qquad$
4. E xplain the slope based on the regression equation and the in relation of x and y variables.
5. Compute average and standard deviation for both x and y variables. $\qquad$
6. If some one's experience is 10 years old, use Reg. Equ. to estimate his salary. $\qquad$
7. If some one's salary is $\$ 38,000$, use Reg. Equ. to estimate her experience. $\qquad$
8. Compute the coefficient of determination and comment on that.
C

| $\mathrm{X}=$ Year $(1998=0)$ | 0 | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $\mathrm{Y}=$ Net connected PCs(mil) | 22 | 32 | 45 | 58 | 70 | 86 | 99 | 119 | 140 | 155 | 178 |

1. Use the data and plot the data as a scattered diagram and comment on the pattern of the points.
2. Compute the correlation coefficient and comment on that $\qquad$
3. Compute the slope and y-intercept and write the equation of regression line. $\qquad$
4. Explain the slope based on the regression equation and the in relation of $x$ and $y$ variables.
5. Compute average and standard deviation for both x and y variables.
6. Use Reg. Equ. to estimate how many PCs will be connected by year 2009 ? $\qquad$
7. Use Reg. Equ. to estimate in what year about 250 million PCs are net connected. $\qquad$
8. Compute the coefficient of determination and comment on that.

D

| $\mathrm{X}=$ IQ Score | 120 | 140 | 130 | 150 | 142 | 130 | 135 | 175 | 149 | 168 |
