

Kin Davalos

Digital Artist

Animator

Marketing & Logos

Cofounder of KinChu Productions

Bio

I'm a digital artist from California. Art, especially Anime, Gothic, and Lolita style, is a big part of my life. I'm an avid doodler and love to animate.

Together, with my sister, I've started an international production company. We produce original games and animated series.

I've worked in marketing, t-shirt design, logo creation, web design and illustrated for children's books, artbooks, calendars, and informational pamphlets.

Graphic Novels

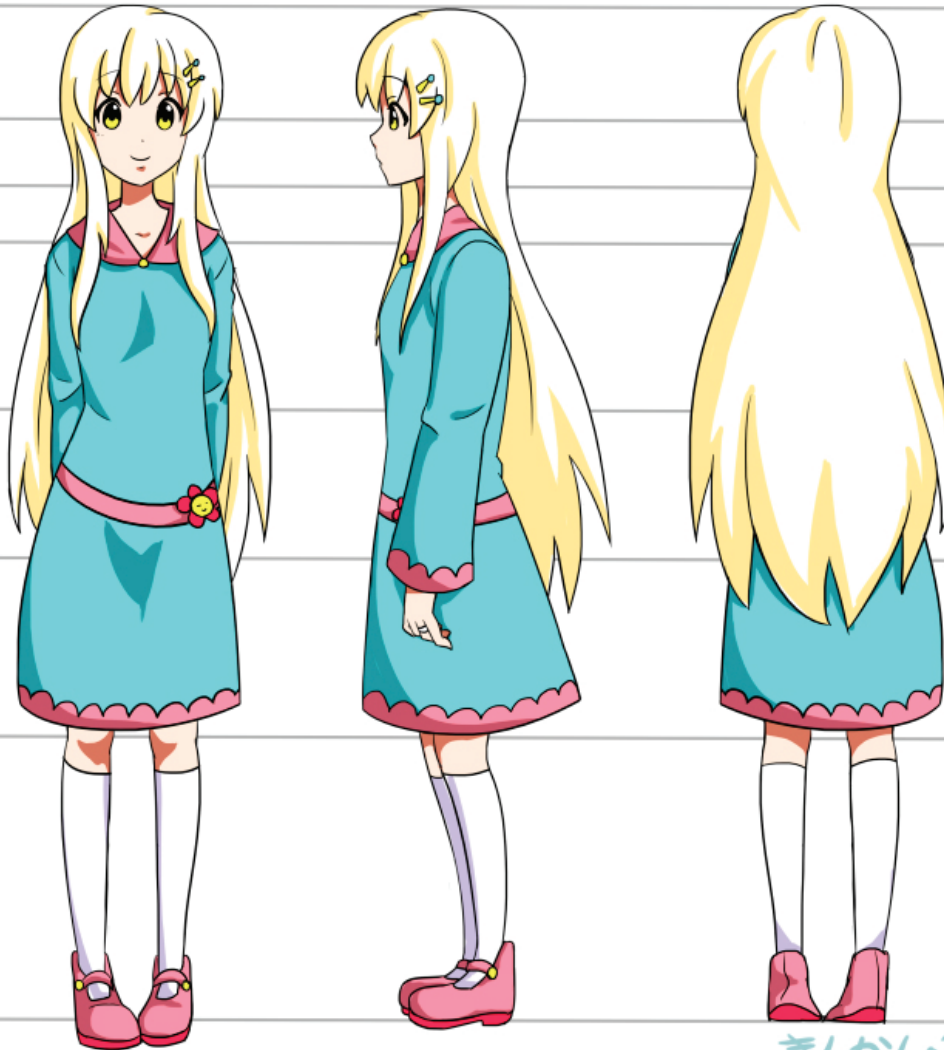

Education

Five years of study at The School of Light and Color
American River College (Graduating 2017)
AA Degree Majoring in Art New Media
with an Illustration Certificate

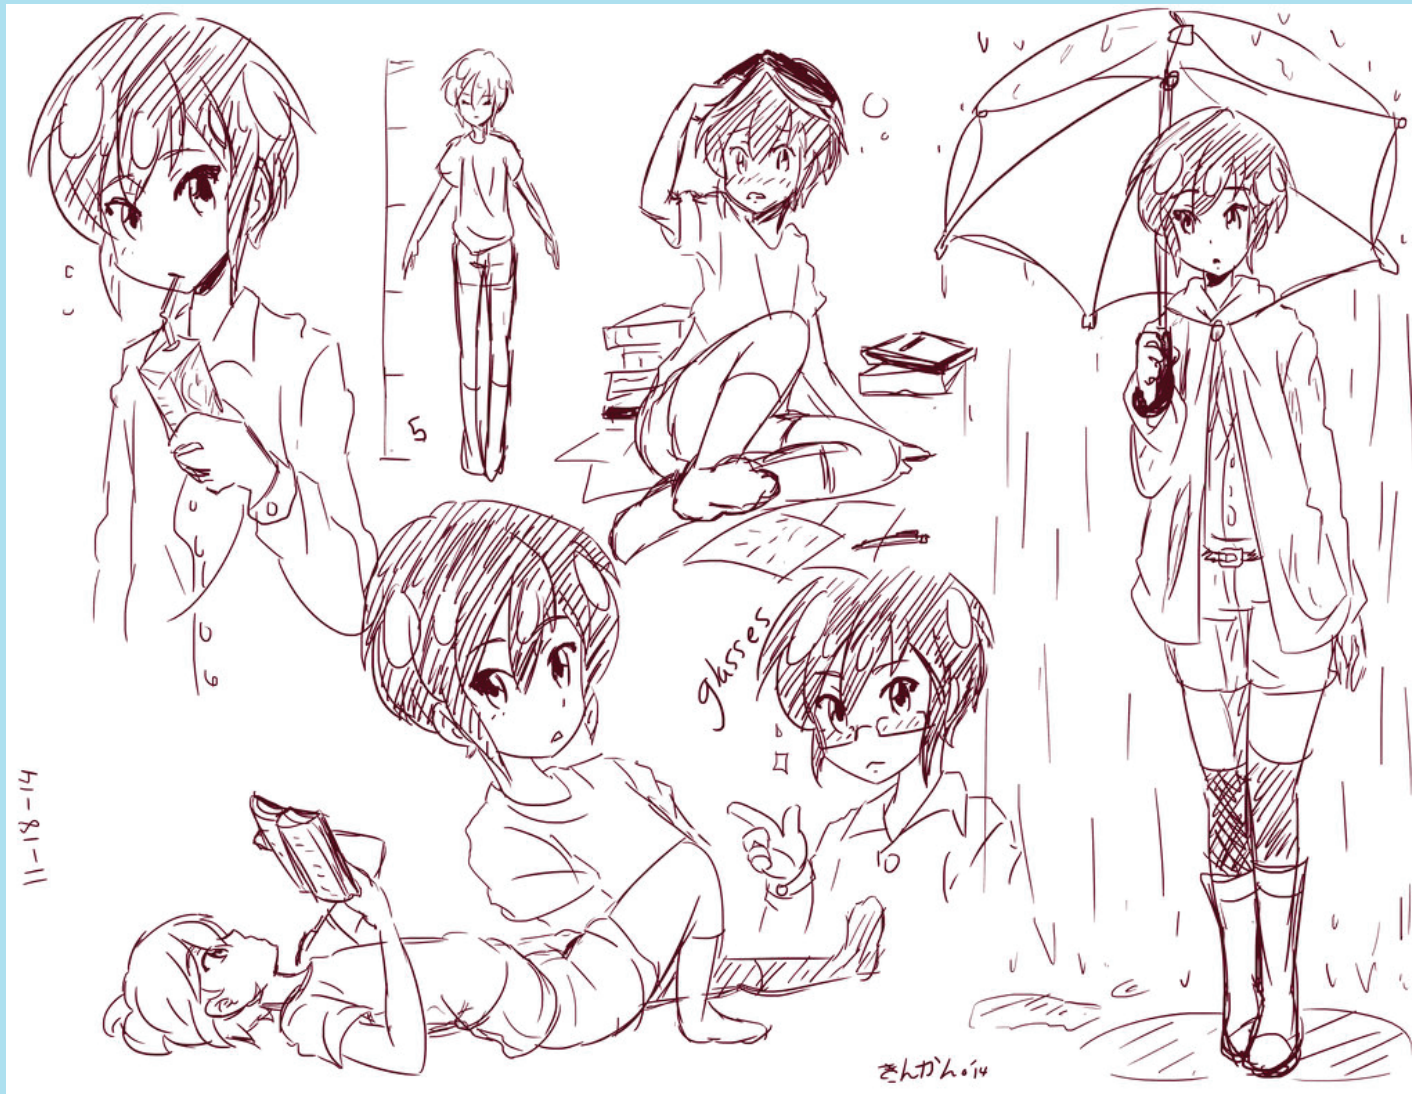

Character Design

Mrs. Kobayashi

ぎんかん'05

Turn around
study for
Mrs. Kobayashi;
a character for
the animated
series,
Love of My Life.

Loose movement character study for John.

What is a Sea Bunnie?

These "bunnies" are actually sea slugs called Jorunna Parva.

Jorunna is a genus of sea slugs, dorid nudibranchs, shell-less marine gastropod molluscs in the family Discodorididae.

Jorunna species are usually camouflaged to match the sponges they feed on, which in many cases belong to the family Chalinidae. It is likely that many undescribed species exist.

Jorunna parva is a species of sea slug, a dorid nudibranch, a shell-less marine gastropod mollusc in the family Discodorididae. The species was first described by Kikutaro Baba. The resemblance of Jorunna parva's rhinophores to bunny ears and its other features facilitated a surge in popularity on Japan's twittersphere in 2015.

This species was described from Kii Province, Japan. Jorunna parva has subsequently been reported from the Philippines, Tanzania, Papua New Guinea, Seychelles,

Jorunna Parva Habitat at Shimoda Marine Research Center

Ocean is the source of life and has given rise to biodiversity. To understand our planet and human beings, knowledge about marine organisms are essential. The 21st century is the era of life and environmental sciences. Shimoda Marine Research Center (SMRC), the center for the research and education of marine biology in University of Tsukuba, aims to explore the basic principles of life and interactions among organisms through education and research using both basic and advanced technologies on marine organisms.
